

## **Invitation to a Driving Simulator Study**

VT researchers in the Cognitive Engineering for Novel Technologies (COGENT) Lab are recruiting participants for a research experiment to investigate driver behavior and performance in various driving contexts to inform design of advanced driver assistant systems.

During the experiment, you will be asked to drive a mini cooper in a driving simulator. While you are driving your eye gaze will be recorded. After your driving, you will be asked to answer questions and rate your experience. The study would last about 1 hour.

To participate in this study, you must

1. be over 18 years old
2. have a driver's license with at least 2 years of driving experience
3. have normal or corrected-to-normal vision (after corrected using contact lenses).

You will be compensated with \$10 for your participation. The results of this study may be published or presented at a conference. It is possible that you may feel nausea while driving in the simulator. If you are prone to motion sickness and nausea, you might not want to participate to reduce the risk of experiencing any negative effects from the simulator. Your participation is voluntary and confidential.

If you have any questions or interested in participating, please contact Hyungil Kim via email [hci.kim@vt.edu](mailto:hci.kim@vt.edu).
